

## THOR Spring School on Science Communication Prague, March 18-22, 2019

COST Action 15213 - THOR

In many current debates it is becoming increasingly difficult for science to make its voice heard. In times of so-called "alternative facts" scientific results are sometimes even deliberately ignored or manipulated to gain advantages.

Many scientists withdraw from this discourse, largely due to a lack of time, knowledge and structures.

The THOR Spring School brings together scientists from particle and heavy ion physics to give them an idea on how to communicate their science.

So if you are interested in how to better communicate your science, are actively working in the field of heavy ion reactions or connecting fields, this school is for you!

Together with experienced science communicators we will work on projects that are relevant for your work and can be put into practice after the school.

The program of the workshop is very interactive and offers a lot of space for working and interacting together.

After impulse lectures in the morning, innovative and sustainable concepts of science communication will be worked on in parallel group sessions.

The school is fully funded by COST and the participants will be reimbursed after the school.
